## Traditional Fanlights

Adding the personal touch of a leaded, coloured glass effect to a fanlight is very simple to achieve. Our definitive range of styles is inspired by the decorative influences of past ages and includes classical and traditional floral designs as well as 'art nouveau' and contemporary images.

## Clear Bevels

Clear glass bevels provide exceptional depth and radiance with their three dimensional brilliance. They are hand made from 5mm glass and when combined with lead profiles and coloured glass effect films, they create a stunning focal point for any fanlight design.

**Glue Chipped Glass Bevels**

A further option and one that gives our bevel designs an added dimension, are these clusters with a textured surface finish. By enhancing the relief effect they bring a spectacular sparkle to our designs. They are made by glue-chipping the glass - a traditional technique that creates a fern effect of clear and frosted glass.

**Coloured Glass Bevels**

Why not bring a natural splash of colour to your bevelled glass design with our range of multi coloured clusters? Choose from blue, green or bronze to further enhance the radiance and three dimensional bevel effect through the changing depth of colour when viewed from different angles.
